Canon imageCLASS 2200 Advanced Copier
\$25,199.93
Top Product Profit

The Canon imageCLASS 2200 Advanced Copier by itself made \$25.2K in profit, which is more than the next three best-selling products put together. On the flip side, the Cubify CubeX 3D Printer (Double Head) lost \$8,880, making it the absolute worst-performing item in the entire product catalog.

Machines generates substantial revenue (\$189K in sales) but returns almost no profit (1.8% margin) — a high-volume, low-efficiency category worth investigating for cost or pricing issues.

Retail Sales Performance & Profit Analytics - Regional Analysis

Count of StateID

West

Top Region Name

Central

Lowest Margin Region

Texas

Bottom State Name

Central - Furniture

Weakest Region Category

Money losses are limited to specific areas rather than entire regions. Across the whole company, central furniture is the only specific region and product mix losing money (-1.75%). Similarly, the \$25.7K loss in Texas comes strictly from binders and appliances being sold at a flat 80% discount. It is a bad discount rule that can be fixed, not a widespread pricing

Retail Sales Performance & Profit Analytics - Customer Segment Analysis

Consumer

Top Segment

Consumer

Highest Risk Segment

Home Office

Fastest Growing Segment

51.53%

Consumer - Texas

Weakest Segment State

(\$20.60K)

Consumer brings in the most profit but is also the riskiest because nearly one in five orders loses money, while Home Office is expanding the fastest with a huge 51.5% jump and strong returns in the East. Furniture struggles across the board, and price cuts over 20% destroy profits for all customer types (with Consumer in Texas losing the most money \$20.6K), though the same few states show up everywhere, proving the issue is bad discount rules rather than the customer segment themselves

Worst Discount Anomaly Loss

Giving discounts over 20% makes the company lose money, dropping from a \$331K profit on smaller discounts to a \$45K loss on larger ones, with tech items handling price drops much better than furniture. The biggest losses come from a specific 80% price cut used only for binders and appliances in Texas and Illinois, so setting a 20% discount limit and checking those two states will fix the problem safely.

YoY Sales Growth %

The company can get back about \$67K in lost profits (a 23% uplift) by fixing two separate issues without slowing down sales or stopping any product lines. First, putting a 20% limit on discounts will save around \$45K, and second, fixing ongoing money losses in tables, bookcases and office supplies (concentrated in central furniture category) will bring back another \$22K.

Type	Priority	Finding	Recommendation	Recoverable Profit Opportunity
💰	1	Discounts $\geq 20\%$ lose money across the board	Cap discounts at 20% company-wide	\$45.0K
💰	2	Texas and Illinois 80% override on Binders/Appliances	Audit and remove immediately	Subset of Row 1 (\$45.0K)
💰	3	Tables, Bookcases, Supplies, Central-Furniture losing money structurally	Review pricing/cost, not discount policy	\$22.4K
📱	4	Technology resilient even at high discount	Protect and prioritize in assortment planning	Growth
📱	5	Home Office fastest-growing segment (+51.5%)	Invest further, especially in East region	Growth
⚠️	6	Consumer has highest loss-order rate (19.3%)	Tighten discount approval for Consumer orders	Risk
